

COMPUTER VISION FACT SHEET

Computer vision offers a significant competitive advantage, operational efficiency and top-line growth for early adopters.

99%

accuracy rates of current deep learning models at identifying & classifying images in a key benchmark data set - improved from 50% in the last decade

\$17.4B

forecasted market size of the 2024 computer vision market - if you aren't utilizing this technology, your competition is

15 mins.

the time it takes to process very large sets of images - not that long ago, this would take weeks

3 billion

the amount of images that are shared each day using various social media platforms

50%

The percentage of all online searches through voice or image search

Practical Computer Vision Use Cases

Identify equipment flaws, corrosion and defects improving asset health

Deep learning is the basis for drone delivery

Real-time decisions are critical in any autonomous vehicle application

Decrease time to insight by improving image search in research applications

Facial recognition applications recognize high-value customers and combat fraud

90% of all medical data is image based, enable new diagnostic methods & assist with surgery

Artificial Intelligence Adoption Numbers

47%

of business executives say their companies have embedded at least one AI capability in their business, 21% say they have embedded AI in several business units, and 30% say they are piloting AI, with 20% planning to deploy across in their business in 2019.

70%

of the companies using AI, 70% will obtain capabilities through the cloud, these cloud applications will make it easier for companies to benefit from AI, accelerating adoption and disbursing benefits.

42%

of business leaders point to lack of AI talent & 43% cite lack of clear AI strategy among top challenges in AI adoption.
