

Situational Intelligence Platform & Mobile Application Powered By AI Vision

Function

With the EyesOnIt platform, your business can gather intelligence from real time video through the application of tailored computer vision.

EyesOnIt can detect selected objects and events in your videos and then trigger business processes to address use cases such as safety, security, productivity, and efficiency.

EyesOnIt can constantly and reliably monitor video feeds with intelligent AI that doesn't get tired or distracted, allowing your employees to focus on work that needs their human capabilities.

EyesOnIt takes the guesswork out of event monitoring, accurate computer vision models identify events that matter to you & your business.

Benefits

The ability to enable event-driven alerting and observer remotely from any device in real-time is incredibly valuable, allowing decisions to be made efficiently & effectively in rapidly changing environments.

Real-Time Alerting - EyesOnIt can accurately identify and summarize visual information, classify objects, detect events, alert users based on the environment, and provide users with the visual insights they need.

Custom Computer Vision & Rapid Artificial Intelligence - Automating human vision tasks is a large cost savings opportunity. Our platform rapidly tags objects & classifies events, storing them as data elements to be used for future analysis.

Custom Development - Our software engineers are fluent across many enterprise data technologies. We can help you implement this platform quickly, providing valuable situational awareness. Mosaic emphasizes privacy and security in any piece of software we deliver, maintaining the highest levels of data security.

Collaboration & Problem Solving - We aren't going to just hand over a license and say 'good luck.' Mosaic excels at tuning our platform to solve the critical, low-hanging operational and strategic use cases you need it to solve. Our collaborative approach will save you time & money as you continue using the platform.

How It Works

Use Cases

Supply Chain

Facilitate the consistent flow of products

EyesOnIT can detect, alert, and connect users on:

- fluctuating inventory levels
- line failure
- quality defects

Energy

Builds resilience against an uncertain future

EyesOnIt can detect, alert, and connect users on:

- Asset degradation
- Major weather events
- restoration diagnosis

Construction

Keep your builds on schedule and profitable

EyesOnIt can detect, alert, and connect users on:

- Materials arriving & departing
- Safety hazards
- Structural errors

Why Mosaic?

Mosaic has a strong history of developing platforms that facilitate making better decisions. Our work for NASA, ExxonMobil, UPS, and FedEx has focused on helping these organizations make better decisions while operating at full speed. Our data scientists have applied deep learning algorithms to many use cases, and bring that expertise to a platform that takes unstructured video and turns it into actionable insights while it continues to learn.

The platform is flexible to allow fine tuning to quickly address operational and strategic use cases. We collaborate with you to save time and money, optimizing the processes and maximizing the outcomes. Connecting people with an intelligent view into places they are unable to go is a huge step forward.

With the EyesOnIt platform, your business can gather intelligence from real time video through the application of tailored artificial intelligence. EyesOnIt can detect selected objects and events in your videos and then trigger business processes to improve use cases such as safety, security, productivity and efficiency. Leverage video from stationary cameras, drones, or employee mobile devices to obtain real time intelligence from your existing corporate assets.
